Information for parents

whose children are cared for in nursery schools or daycare

Information for funding agencies, management, staff

of nursery schools and daycare centres

Further product for self-tests

We informed you about the delivery of antigen self-tests with the Official Information of 8 and 12 April. The first self-tests are now available to the nursery schools and daycare centre carers.

Self-tests of the company "Hotgen" were distributed to the schools and nursery daycare centre carers with these first deliveries. Besides these fast tests intended for use by laypersons, self-tests of the company "LEPU MEDICAL" with the "NASO-CHECKcomfort SARS-CoV-2-Antigen-Schnelltest" product designation will be included in the next deliveries as well. These tests have likewise been approved by the

Federal Institute for Drugs and Medical Devices for self-application by laypersons. Although they slightly differ from the self-tests of the company “Hotgen”, they are just as effective in terms of quality.

Application Instructions

You may notice that the instructions for use of the tests differ to some extent. Please take into account that the instructions for use and, in particular, the smear depths indicated therein are always intended for application by adults. Unfortunately there are no special instructions for children. Of course, all tests may only be performed by the parents.

The sampling stick has to be inserted **into your child’s front nose area only**. The smear depth hence depends very significantly on the size of your child’s nose.

The instructions for use of the “NASOCHECKcomfort SARS-CoV-2-Antigen-Schnelltest” product of the company “LEPU MEDICAL” has been enclosed as an appendix.

Moreover, a video of the manufacturer is available at the following link:
